

Solution Stack

A complete eCommerce solution is built on the foundation of Dynamics and acts as a window into your ERP.

Nomad's standard integration is layered on top of Dynamics to ensure critical data such as customers, orders, pricing, items, invoices, accounts receivable, etc., is exposed to Nomad Sites and Nomad Receivables.

This gives the end-user a more personalized experience as they can log in and see their pricing, terms, shipping information, etc., before purchasing products.

Nomad customers can also deploy a self-services account portal (Nomad Receivables) where B2B customers can access all their activity data; orders, order status, tracking information, invoices, accounts receivables aging, etc.

Nomad Payments will allow end-users to select invoices for payment via ACH/eCheck.

At the top of the solution stack, Nomad integrates with crucial 3rd party solutions that round out customer eCommerce experiences such as Tax (Avalara), Shipping (UPS, FedEx, etc.), and CC Gateways.
